JUKI ECO PRODUCTS The LU-2800V-7 is an eco-friendly product which complies with JUKI ECO PRODUCTS standards for protecting the environmen

● The sewing machine complies with the "Juki Group Green Procurement Guidelines" on the use of hazardous substances which is stricter than other restrictions, such as those of the RoHS Directive.

For details of JUKI ECO PRODUCTS, refer to: https://www.iuki.co.ip/en/company/eco

2-11-1, TSURUMAKI, TAMA-SHI, TOKYO 206-8551, JAPAN PHONE: (81) 42-357-2383 FAX: (81) 42-357-2274 https://www.juki.co.jp/en

* Specifications and appearance are subject to change without prior notice for improvement * Read the instruction manual before putting the machine into service to ensure safety.

* This catalogue prints with environment-friendly soyink on recycle paper.

NOVEMBER, 2019 Printed in Japan(TN)

LU-2800V-7 Series

Semi-dry Direct-drive, Unison-feed, Lockstitch Sewing System with automatic thread trimmer

Inspire the Knowledge in Sewing Adjustment **Epoch-making Sewing Systems in history**

Semi-dry Direct-drive, Unison-feed, Lockstitch Sewing System with automatic thread trimmer

LU-2800V-7 Series

Management of sewing performance and sewing machine with JUKI's next-generation sewing system.

Machine is mounted with inbuilt NFC (Near Field Communication) and communication devices capable of a 2-way data transmission.

Management of sewing performance and sewing machine by the utilization of IoT (Internet of Things)

Sewing & Textile made

Management, browsing and editing of data can be carried out on the application software

Data on sewing machine adjustments made according to the product to be sewn can be transferred to a commercially-available Android tablet in contactless mode. This enables quick check for uniform settings as well as confirmation of conditions of sewing machines in a sewing line, thereby facilitating setup changes. The operation panel is also provided as standard with a USB port. Data management and software update can be carried out with ease using a USB thumb drive.

Data items of sewing can be numerically managed to ensure "stable quality" and reduction in time required for setup changes. Quantified sewing data can be externally taken from the sewing machine using an Android tablet or USB thumb drive.

*Android OS Version 6.0 is recommended to use JUKI Smart APP. (Operation is confirmed with respect to Versions 5.0 and later.)
Contact JUKI distributor in your area for how to use the application software

The sewing machine can be paired with equipment which supports
NFC (Near Field Communication) only by holding the equipment over

Adjustment of sewing condition is displayed on one screen

Sewing conditions can be set easy since sewing conditions such as thread tension, stitch length, presser foot pressure, alternate vertical movement amount, etc. are displayed on one screen.

Energy-saving effect

Automatic OFF function of the operation-panel backlight

The operation-panel light can be turned OFF after a lapse of the preset time.

Sleep mode (Automatic power-OFF function)

If no operation is carried out for a predetermined period of time, the power supplies to the motor, etc. can be automatically turned OFF.

*These options can be set up on the operation panel.

LU-2828V-7 Semi-dry Direct-drive, 1-needle with automatic thread trimmer (Vertical axis 2.7 fold-canacity)

Semi-dry Direct-drive, 1-needle, Unison-feed, Lockstitch Sewing System with automatic thread trimmer (Vertical axis 2.7 fold-capacity hook / Shorter - thread remaining type)

Shorter - thread remaining type

The shorter-thread remaining type LU-2828V-7 is a high-performance sewing machine.

It leaves a shorter thread on the material at the beginning of sewing by means of the needle thread clamp device, as well as at the end of sewing by means of the thread trimmer which is provided with a shorter-thread remaining function. This means that manual thread nipping both at the beginning and at the end of sewing is no longer required, thereby helping reduce operator fatigue.

Thanks to the adoption of a 2.7-fold hook, the frequency of bobbin thread changing is reduced and workability is improved.

Beautiful finished seams Needle thread clamping device

This device pulls the needle thread into the wrong side of the material at the beginning of sewing, thereby ensuring more beautifully-finished

The material at the beginning of sewing

The material at the end of sewing

Surface side

The needle thread does not remain on the surface side of the material. (The needle thread clamp is turned ON.)

*LU-2828V-7 can produce the effect of shorter-thread remaining by making condensed stitch.

The shorter-thread trimming mechanism (Legyle thread roll-in and shorter-thread remaining type) The thread trimming mechanism has been completely renewed. The industry's shortest

The thread trimining mechanism has been completely renewed. The industry's shortest remaining thread length achieved by trimming the thread close to the fixed knife at the last stitch (condensed stitch). (The length of remaining needle thread is 5 mm)

LU-2860V-7

Semi-dry Direct-drive, 2-needle, Unison-feed, Lockstitch Sewing System with automatic thread trimmer (Vertical axis 2.0 fold-capacity hook / 12 mm - pitch type)

light and one and has been adopted. The machine is suited to sew car seats, sofas and bags. It is a sewing machine provided with dramatically improved workability and functions which are required for sewing large products and extra heavy-weight materials.

at Bag Sofa

The maximum stitch length is 12 mm

This model is the most-desired sewing machine for sewing furniture such as sofas. It is best-suited to topstitching with a stitch length of maximum 12 mmpitch. During the topstitching process, the longer distance from the machine arm to the bed, in particular, effectively demonstrates the machine's improved workability.

• The maximum stitch length is 12 mm

• General stitch length is 6 mm

MINISTER MANAGEMENT	CHARLES AND A	NATIONAL PROPERTY.
		A CAMP TO STATE

Standard equipment

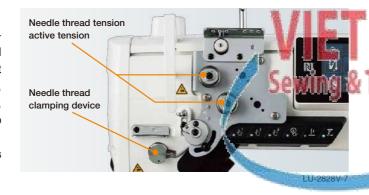

Adoption of the needle-thread active tension

Needle tension is digitally controlled

Needle thread tension which matches sewing conditions given can be set on the operation panel and stored in memory. The needle thread tension adjustment needs experience. However, for this sewing machine, thread tension data stored in memory is reproducible, thereby reducing the setup time when the product to be sewn is changed.

Example: Needle-thread active tension demonstrates its effectiveness in the topstitching process.

Active presser foot pressure mechanism

The presser foot pressure is digitally controlled

Digital control system controls the presser foot pressure. Under the automatic mode, the multi-layered section detection function detects changes in material thickness to increase/decrease the presser foot pressure accordingly. Under the manual mode, the presser foot pressure control function is assigned to the hand switch to enable operation with the hand switch.

LU-2828V-7

Best-suited stitches are produced at multi-layered parts of material.

Multi-layered part detection function

Multi-layered parts of material which occur in the case two or more plies of material are sewn or different kinds of material are sewn can be detected by the multi-layered part detection function to change over the stitch length, thread tension, presser foot presser and amount of alternate vertical movement to those that have been predetermined for sewing those parts of material.

Setting of thresholds for the multi-layered part detection

Under the teaching mode for the multi-layered part changeover ON sensor value, the material thickness at the normal part and that at the multi-layered part of material can be measured with ease.

The automatically-measured thresholds can be set as those for the multi-layered part detection.

Multi-functional 6-string switch

Sewing conditions can be changed to the best-suited ones only with the one-touch changeover switch.

The sewing data (stitch length, needle thread tension, amount of alternate vertical movement, presser foot pressure and sewing speed) can be changed easily with the one-touch changeover switch to obtain the ones that have been elaborated according to sewing conditions.

The sewing data (stitch length, needle thread tension, amount of alternate vertical movement, presser foot pressure and sewing speed) can be changed easily with the one-touch changeover switch to obtain the ones that have been elaborated according to sewing conditions.

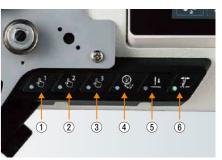

Four different one-touch functions can be assigned to six-gang hand switches 1 to 6, touch-back switch and jog dial, at the maximum.

(*For the initial settings, the one-touch functions are assigned to 6-gang switches 1 to 3.)

Improvement of operability by means of the jog dial

The operator is able to turn the main shaft (for moving the needle bar up and down) only with the jog dial without stretching his/her arm to the hand-wheel.

When the jog dial is pushed, it can be used as 1/2 needle-stitch correction switch (one touch function)

- 1) to 3): One-touch changeover function
- ④: Automatic reverse feed stitching changeover switch
- (5): Needle-entry alignment switch
- 6: Thread clamp switch

Other continuous sewing conditions

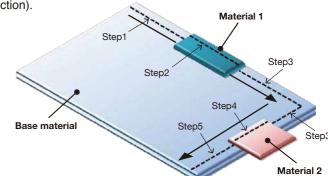

For settings corresponding to continuous sewing conditions (polygonal shape stitching function),

more beautifully finished seams are produced by using various functions (austom-pitch setting function, reverse-feed stitching function).

Example) Sewing conditions in the case of using __the polygonal-shape stitching function (LU-2828V-7)

In the case of sewing materials 1 and 2 that differ in thickness to the base material (material thickness), the sewing conditions can be easily changed over to the best-suited ones on a step-by-step basis.

(The number of stitches, one-touch changeover and muiti-layered part detection are used as the step-bystep changeover triggers.)

Bobbin thread spool device Bobbin thread spool device is no necessity of rolling thread manually.

■ Maintenance work carried out safely (Standby switch)

When the standby switch is pressed, the sewing machine does not start unexpectedly even if the pedal is depressed. When the standby switch is pressed, operations through the operation panel, and with the machine 6-string switch and jog dial are also disabled, thereby allowing sewing-machine maintenance work such as threading, needle replacement, gauge replacement to be carried out safely. (In this case, the pulley can be turned by hand.)

High-torque direct-drive motor is installed

The direct-drive motor system has been adopted by all of the sewing system with a thread trimmer. As a result, the sewing machine starts up swiftly and promises increased stop accuracy, thereby demonstrating improved responsiveness.

LED Light

The LED light can adjust the light intensity to 5 levels, and Off setting is also possible. The operator can set the brightness which is easy to work, improving work efficiency.

Smart Devices Options (to be mounted by manufacturers)

Cover Sensor Unit The cover sensor unit detecting A, B and C (shown below) are closed tightly during sewing, thereby preventing the sewing machine from starting up unexpectedly. (A, B and C can be used discretely.)

A: Eye guard with an open / close sensor

The eye guard prevents a broken needle from flying off. If the eye guard is open, the sewing machine cannot be started.

As a result, the sewing machine will not start up unexpectedly even if the operator forgets to turn the power off.

B: Bed slide with an open / close sensor

The sewing machine will not start if the throat plate is open.

This prevents the material from being caught in the hook during sewing.

C: Handwheel cover with an open / close sensor

In a situation where the power is on, the handwheel cover with the open / close sensor prevents the sewing machine from starting suddenly. In addition, the cover prevents thread and material from being caught in handwheel during sewing a

Skip Stitch Detector Stitch skipping is detected during sewing. This helps lighten the operator's inspection work load. and also prevents defective products from being shipped. In the case where a skipped stitch is detected, the buzzer sounds up and the sewing machine stops. With this function, the operator is allowed to concentrate on sewing work without worryring about skipped stitching.

Bobbin Thread Remaining Detector The buzzer sounds up when the amount of thread remaining on the bobbin reaches a predetermined length. It is also possible to stop the sewing machine at this point. With this function, the operator is allowed to concentrate on sewing work without caring about the amount of thread remaining on the bobbin. Remaining bobbin reaches a predetermined length. It is also possible to stop the sewing machine at this point. With this function, the operator is allowed to concentrate on sewing work without caring about the amount of thread remaining on the bobbin.
